RITRESH KUMAR

AI PRODUCT MANAGEMENT | PRODUCT STRATEGY | Associate Product Manager | Product Discovery

8279909633 | ritresh.kumar.official@gmail.com | LinkedIn: Ritresh Kumar | Portfolio: https://ritresh.github.io/portfolio/

PROFESSIONAL SUMMARY

AI Product Management professional with knowledge of product strategy, user research, PRD development, KPI analysis, and product lifecycle management. Familiar with AI/ML, LLMs, NLP, Python, SQL, and data analysis. Focused on translating user needs and business objectives into effective, data-driven product solutions.

CORE SKILLS

Product Strategy & Discovery: Problem framing, user needs, product opportunity identification, competitor research, prioritization, MVP scoping, product trade-offs

Product Requirements & Execution: Product requirements documents (PRDs), user stories, requirements definition, feature scope, acceptance criteria, dependencies, risks, non-goals, stakeholder alignment

AI/ML Product Knowledge: Machine learning fundamentals, NLP, deep learning, LLM concepts, RAG concepts, AI recommendation use cases, model evaluation, AI limitations

Data & Technical Fluency: Python, Pandas, NumPy, scikit-learn, TensorFlow, SQL, exploratory data analysis, data visualization, basic ML workflows, understanding of model evaluation

Research & Tools: Evidence assessment, qualitative and quantitative research, Git, GitHub, Jupyter Notebook, Streamlit.

EXPERIENCE

AI Product Research & GEO Strategy — ASAI | PRD

AI search · Product metrics · Research · Technical understanding

- Defined a GEO product strategy and research framework to investigate how AI systems recommend, cite, and represent websites across relevant user queries.
- Established success metrics and KPIs, including recommendation rate, brand mention rate, website citation rate, and recommendation consistency to evaluate AI visibility.
- Structured an iterative optimization workflow covering baseline measurement, seven-disease diagnosis, hypothesis development, improvement recommendations, re-auditing, and validation.
- Translated research findings into evidence-based product requirements, prioritizing content relevance, information quality, credibility and user usefulness while treating AI visibility improvements as testable hypotheses.

SELECTED PRODUCT & AI PROJECTS

Zepto — My Buckets: AI-Assisted Reordering | PRD

Product discovery · PRD · AI recommendations · Quick commerce

- Identified a recurring-purchase problem among repeat users and families, defining a product opportunity for persistent, user-created shopping buckets to simplify multi-item reordering.
- Developed a structured PRD covering MVP scope, prioritized user stories, functional requirements, acceptance criteria, user flows, non-goals, dependencies, risks, and open questions.
- Specified AI-powered product recommendations using purchase history, bucket context, and user preferences, alongside opt-in suggestions, one-tap reorder-to-cart, out-of-stock substitutions, and user-control safeguards.
- Defined pilot-oriented KPIs, including bucket adoption, checkout conversion, average buckets per user, and AI suggestion acceptance; proposed an approximately 200-user pilot to evaluate performance before broader rollout.

Parloa — Enterprise Voice AI Customer-Service Case Study | CASE STUDY

AI product research · Competitive analysis · Evidence assessment

- Analyzed enterprise Voice AI use cases across Schwäbisch Hall and A.T.U., evaluating conversational AI workflows, intent recognition, authentication, call routing, appointment booking, and human escalation.
- Evaluated vendor-reported KPIs, including 98% intent recognition, 500K calls handled, and 60% lower employee phone time, distinguishing operational efficiency metrics from unverified customer outcomes.
- Identified product-evaluation gaps in AI-specific CSAT, resolution rate, and Customer Effort Score (CES), highlighting the need for outcome-based metrics to validate customer experience and product effectiveness.

EDUCATION

Bachelor of Computer Applications (BCA) | Institute of Technology and Science College, Chaudhary Charan Singh University | Graduated: 2026

Master of Computer Applications (MCA),

CERTIFICATIONS

- Python for Data Science — IBM
- Machine Learning Specialization — Coursera
