RITRESH KUMAR

AI PRODUCT MANAGEMENT | PRODUCT STRATEGY | Associate Product Manager | Product Discovery

8279909633 | ritresh.kumar.official@gmail.com| GitHub: github.com/Ritresh | LinkedIn: Ritresh Kumar

PROFESSIONAL SUMMARY

Product-focused professional with a foundation in product discovery, market and competitor research, problem framing, and requirements development, supported by technical knowledge of data science, machine learning, NLP, and generative AI. Skilled at translating research and user problems into structured product requirements, defining success measures, and evaluating trade-offs with technical feasibility in mind. Brings an analytical, evidence-driven approach to exploring opportunities and shaping practical solutions across AI-enabled and digital products.

CORE SKILLS

Product Strategy & Discovery: Problem framing, user needs, product opportunities, competitor research, prioritization, MVP scope, product trade-offs

Product Requirements & Execution: PRDs, user stories, requirements definition, feature scope, acceptance criteria, dependencies, risks, non-goals, stakeholder alignment

AI/ML Product Knowledge: Machine learning fundamentals, NLP, deep learning, LLM concepts, RAG concepts, AI recommendation use cases, model evaluation, AI limitations

Data & Technical Fluency: Python, Pandas, NumPy, scikit-learn, TensorFlow, SQL, exploratory data analysis, data visualization, model evaluation

Research & Tools: Evidence assessment, qualitative and quantitative research, Git, GitHub, Jupyter Notebook, Streamlit

SELECTED PRODUCT & AI PROJECTS

Zepto — My Buckets: AI-Assisted Reordering | PRD

Product discovery · PRD · AI recommendations · Quick commerce

- Defined a product concept for persistent, user-created shopping buckets to help repeat users and families reorder recurring groups of items without rebuilding carts.
- Specified core user stories for bucket creation, opt-in AI-suggested items, one-tap reorder-to-cart, and bucket management, including out-of-stock substitution handling.
- Defined pilot-oriented success measures including bucket adoption, checkout conversion versus manual cart building, buckets per adopting user, and AI suggestion acceptance; kept baselines and targets explicitly unvalidated.
- Documented scope, non-goals, user-control guardrails, risks, and open questions; recommendations remain a proposed PRD rather than a launched or validated feature.

Parloa — Enterprise Voice AI Customer-Service Case Study | CASE STUDY

AI product research · Competitive analysis · Evidence assessment

- Analyzed Parloa's enterprise Voice AI use cases across Schwäbisch Hall and A.T.U., including natural-language customer interactions, authentication, routing, appointment booking, and human escalation.
- Compared vendor-reported operational outcomes with the availability of independent customer-impact evidence; distinguished deployment and efficiency claims from unverified CSAT, resolution, and customer-effort outcomes.
- Identified evidence gaps and product-evaluation questions, emphasizing that intent recognition and call-handling volume alone do not prove customer satisfaction or successful resolution.

Generative Engine Optimization (GEO) — Measurement & Improvement Framework | PRD

AI search · Product metrics · Research · Technical understanding

- Outlined a framework to assess how AI systems mention, recommend, cite, and accurately represent a company across different queries, contexts, and competitors.
- Defined measurement concepts including mention rate, recommendation rate, citation rate, representation accuracy, competitor visibility, and context visibility.
- Specified an iterative workflow: measure current performance, diagnose gaps, form a hypothesis, improve information quality and accessibility, retest comparable queries, and compare outcomes.
- Emphasized evidence-supported claims, useful first- and third-party information, source quality, and accurate company representation rather than publishing content volume for its own sake.

EDUCATION

Bachelor of Computer Applications (BCA) | Institute of Technology and Science College, Chaudhary Charan Singh University | Expected graduation: 2026

CERTIFICATIONS

- Python for Data Science — IBM
- Machine Learning Specialization — Coursera
